

Web Application PayPal Integration

Project Configuration

Clone from GitHub <https://github.com/kelvinmushy/task-paypal.git>

Backend configuration

Get From Inside Frontend folder path [task-management/backend](#)

- Database name : [paypal](#)
- Composer install if dependency miss

Run these Command

- Composer install
- php artisan migrate to have all necessary tables
- php artisan jwt:secret

Rest API

I used [JWT](#) for secure our API

Run the Following command to refresh session

- Php artisan key:generate
- Php artisan config:cache
- Php artisan jwt:secret

FRONT END CONFIGURATION (ReactJs)

After Clone

- Run npm install
- npm start

SANDBOX CREDENTIAL
